

One packaged solution: Faster and cheaper for you

In the biogas market, speed and ROI are key. Every minute you're not producing gas, you're losing money, but you don't need us to tell you that. Get2Gas is Revere's turnkey biogas hardware, software, and reporting package that helps you get your gas to market faster than anyone else and keeps your operating costs low.

What is Get2Gas?

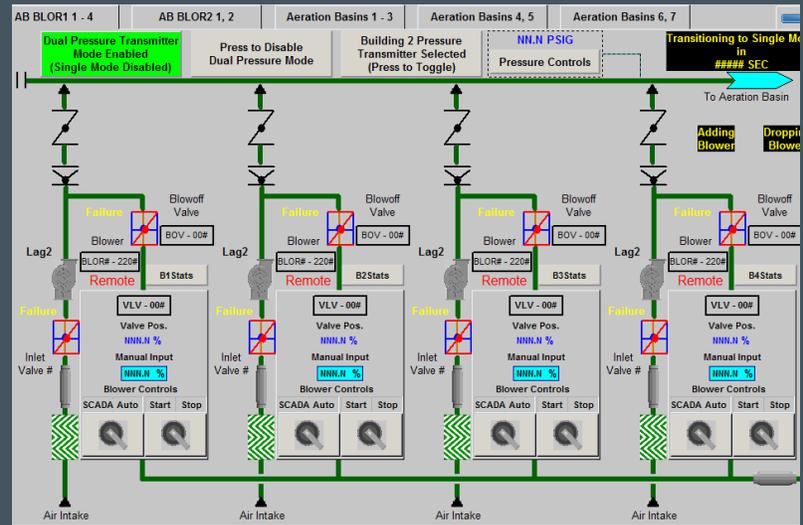

Get2Gas is a pre-designed application suite engineered specifically to get biogas facilities online and running at peak efficiency in a short period of time. Get2Gas was created to address the two primary needs of every biogas application: time to market and operations cost.

Quicker Time to Market

- As a packaged, pre-tested system, Get2Gas minimizes costly engineering time. In one package, you get the full scope of hardware components, software programming, instrumentation, and user interfacing that you need to get your facility online quickly.
- Get2Gas is a proven solution that's running real biogas plants right now, so you know it'll work. The standardized elements of the solution decrease commissioning time, cutting another slow part out of your process to market.
- We've built a standard package of performance KPIs and operator reports that are ready to go out of the box. Operator training can happen during the project, so once your system is ready, so are your operators.

Lower Operations Cost

- Get2Gas includes a host of operational efficiency features that allow your operators to manage with ease. It's scalable to let your facility grow without your costs ballooning.
- All software is licensed to the on-site system, so no long-term monthly fees.
- Pre-built online O&M manuals, standardized control objects, and options such as tablet mobility
- Integrated raw materials and byproduct inventory management

Why Trust Revere?

Revere has already earned the trust of some of the leading firms in the biogas field, and we're ready to be your complete electrical, automation, and control partner in biogas. Get2Gas is the result of decades of disparate industry experience for Revere brought to bear on your biogas needs.

- Revere's 40+ years of experience working with pre-treatment of water/wastewater, biologic process controls, waste management OEMs, midstream gas applications, and GCs/EPCs uniquely qualify us to offer Get2Gas.
- Packaged, not proprietary: We don't use black-box, cheap parts. Simply by leveraging our considerable expertise, we utilize quality, off-the-shelf items to build the best biogas system faster, cheaper, and better than anyone else can.
- The bottom line: Choosing Revere as your biogas partner has proven to be the safest and fastest way to Get2Gas. Trust us to help you today.

Get2Gas

Turnkey BioGas Solutions

One Solution, No More Headaches

Get2Gas is a packaged solution of controls, but it's more than that. It's a single facility management system that helps you monitor everything. Get2Gas is the solution that runs your farm.
